Abstract

The unwavering commitment of the Indonesian government to enhance efficiency and transparency is evident in Presidential Regulation of the Republic of Indonesia Number 95 of 2018 on the Electronic-Based Government System (SPBE). In alignment with this dedication, this study focuses on evaluating and improving the Information System Service of the Public Information and Documentation Service (PPID) within the Health Department of East Java Province, adopting security standards outlined in SPBE. The primary objective is to employ the Prototyping method, following the guidelines provided by SPBE's Technical Standards and Security Procedure, implemented through the Laravel framework.

The research process commences with a thorough problem analysis using observation and interview techniques. Essential insights from literature studies contribute to the development of the PPID information system. Service evaluation is conducted to generate recommendations for enhancement. The implementation phase integrates the
