ABSTRACT

A cat and dog pet service facility is a place that provides various things related to these pets, from health, care, training to the equipment the animals need. There are various pet service facilities from macro to micro needs, but in the city of Surabaya only a few facilities are available, such as pet shops, clinics and grooming, and these facilities are not located in one location. Apart from that, in the city of Surabaya itself there are still very few buildings or facilities for pet services. Cases of pet diseases are now increasing in number and type, both contagious and not. The application of biophilic design is an architectural design that seeks to improve human health, fitness and well-being by increasing productivity and maintaining the function and resilience of natural systems over time. Regarding this problem, the author applies biophilic design to the interior of cat and dog pet service facilities with complete facilities so that they can accommodate all the activities of these pets in one location. It is hoped that with the author's thoughts and ideas, this cat and dog pet service facility will be useful and beneficial for animals, animal owners and animal caretakers in the city of Surabaya.

Keyword: Pet, Service Facilities, Biophilic.

ABSTRAK

Fasilitas pelayanan hewan peliharaan kucing dan anjing merupakan suatu wadah yang menyediakan berbagai macam yang berkaitan dengan hewan peliharaan tersebut dari mulai kesehatan, perawatan, pelatihan hingga perlengkapan kebutuhan hewan tersebut. Berbagai fasilitas pelayanan hewan peliharaan dari kebutuhan makro hingga mikro, namun di kota Surabaya hanya beberapa fasilitas saja yang tersedia seperti *pet shop*, *klinik* dan *grooming*, dan juga fasilitas tersebut tidak berada di satu lokasi. Selain itu di kota Surabaya sendiri masih sedikit bangunan atau tempat fasilitas pelayanan hewan peliharaan. Kasus penyakit hewan peliharaan tersebut juga kini semakin banyak jumlah dan jenisnya, baik yang dapat menular maupun tidak. Penerapan desain biofilik merupakan desain arsitektural yang berupaya meningkatkan kesehatan, kebugaran, dan kesejahteraan manusia dengan meningkatkan produktivitas dan menjaga fungsi serta ketahanan sistem alam dari waktu ke waktu. Mengenai permasalahan tersebut maka penulis menerapkan desain biofilik terhadap interior fasilitas pelayanan hewan peliharaan kucing dan anjing dengan fasilitas yang lengkap sehingga dapat mawadahi segala kegiatan hewan peliharaan tersebut dalam satu lokasi. Diharapkan dengan adanya ide dan gagasan penulis semoga fasilitas pelayanan hewan peliharaan kucing dan anjing ini dapat berguna dan bermanfaat bagi hewan, pemilik hewan dan perawat hewan di kota Surabaya.

Kata Kunci: Hewan Peliharaan, Fasilitas Pelayanan, Biofilik.
