

## DAFTAR GAMBAR

|                                                                                             |    |
|---------------------------------------------------------------------------------------------|----|
| Gambar 2.1 Proses Elektroplating.....                                                       | 7  |
| Gambar 2.2 Mikroskop Metalografi.....                                                       | 18 |
| Gambar 3.1 Diagram Alir .....                                                               | 19 |
| Gambar 3.2 Power Supply .....                                                               | 20 |
| Gambar 3.3 Glass Breaker .....                                                              | 20 |
| Gambar 3.4 Nikel Batangan .....                                                             | 21 |
| Gambar 3.5 Baja Karbon Rendah ST-37 .....                                                   | 21 |
| Gambar 3. 6 Termometer.....                                                                 | 22 |
| Gambar 3.7 Kabel Klem .....                                                                 | 22 |
| Gambar 4.1 Timbangan ( ketelitian 0,001 gram ).....                                         | 34 |
| Gambar 4.2 Contoh Penimbangan Spesimen setelah Elektroplating .....                         | 34 |
| Gambar 4.3 Drawing Specimen.....                                                            | 36 |
| Gambar 4.4 Grafik Laju Korosi dengan Variasi Tegangan dan Waktu Proses Elektroplating ..... | 39 |

## DAFTAR TABEL

|                                           |    |
|-------------------------------------------|----|
| Tabel 2.1 Tabel Spesifikasi Nikel .....   | 9  |
| Tabel 2.2 Tabel Komposisi Watt Bath ..... | 12 |
| Tabel 4.1 Tabel Data Weight Loss.....     | 35 |
| Tabel 4.2 Tabel Laju Korosi.....          | 37 |

## LAMPIRAN

Proses persiapan spesimen

Proses perendaman spesimen pada rendaman HCL

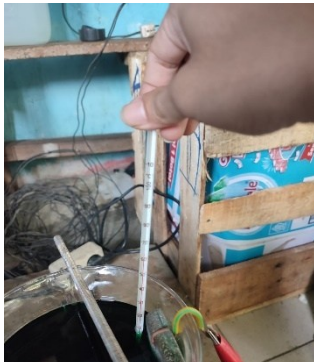

Proses penggosokan spesimen

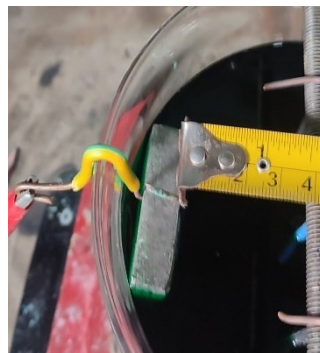

Proses Persiapan Alat Electroplating

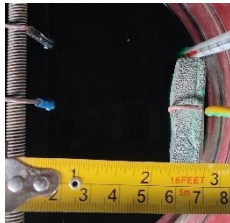

Proses Pemanasan larutan 60°C

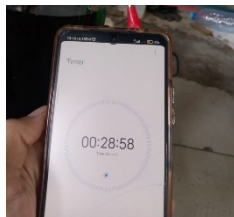

Variasi jarak 40 mm

Variasi 60 mm

Dokumentasi Waktu Plating

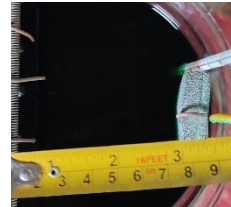

Perendaman pada Aquades setelah plating

Perendaman Air Hujan pH (5,72)

Variasi 80 mm

Proses Electroplating

Proses Penimbangan spesimen setelah plating

Setelah perendaman 15 hari

Penimbangan setelah rendaman 15 hari

Pengamatan Struktur Mikro permukaan spesimen
